

torch-spyre Weekly Trend Report

Week ending 2026-05-29 · Generated 2026-05-29 · Data: 6 daily reports + fresh GitHub state

△ Trend window thin: 4 daily reports for the current week, 2 for the prior. Direction is reliable; magnitudes are not. Establishing a weekday-morning daily run would tighten the next weekly considerably.

Net positive week, but the long tail is the worry. Nightly recovered after a 5-day cat-zero-tensor regression. PR velocity up ~50% wow. Bug count flat at the headline, but 9 bugs are now >90 days old with no recent touch and upstream API churn rose to High in both deeptools (27% API-touching) and flex (67%).

PASS

↑ recovered (was failing 5d)

NIGHTLY TODAY

30+

↑ +50% vs prior week

PRS MERGED (7D)

54

→ flat (count was misreported as 30 earlier)
OPEN BUGS

15

↓ 28% of backlog >30d old

AGING + STALE BUGS

What changed this week

- 1 Backlog age tail surfaced:** 9 bugs now >90 days old with no touch in 60d (#488 bool-tensor copy, #637, #446, #456, #476, #537, ...). Last week's daily reports under-reported the count due to a pagination bug; the long tail was always there. **Action:** sweep this week — close-as-stale, re-validate, or re-label.
- 2 Upstream API risk rose to High** in both upstream repos. `flex a233ca5` adds `FlexAllocator::segment_for_region`; `flex 5132737` consolidates profiler macros (split `PROFILER_STOP_HANDLE` / `PROFILER_STOP` call sites will break); `deeptools 0ded6c7f` changes `BaseOpt/RcuOpt` header signatures. **Action:** rebuild torch-spyre against current upstream HEADs before next nightly.
- 3 Nightly recovered** after 5 consecutive failures (`test_cat_4d_dim2_zero` , `test_cat_4d_dim_m2_empty_first`). Fix commit between May 27 and May 28 03:16 UTC isn't yet identified. **Action:** pin down the fix commit, watch tomorrow's nightly to confirm stability.
- 4 6 Aging bugs (30–90d) lost momentum:** #1392 (Granite vocab EAR overflow), #1712 (Llama mean), #1412, #1713, #1479, #1260. **Action:** assign owners.

- 5 **4 fresh bugs filed:** #2329 (SDPA restickify), #2323 (torch.ne incorrect), #2314, #2313. First-touch triage needed.
- 6 **Sporadic flake class persists** in `LxPlanningTwoOpReductionTest` (fp16 tolerance margin) — rotates between layernorm and mish ops. Widening atol or seeding inputs would close it. Not currently failing.

Week-over-Week Trends

Metric	This week (n=4)	Prior week (n=2)	Δ
Build pass days	4/4 (100%)	2/2 (100%)	→ stable
Nightly pass days	1/4 (25%)	0/2 (0%)	↑ recovered today
PRs merged (rolling 7d at week-end)	30+	20	↑ +50%
Open bug count (true)	54	54 [†]	→ flat
Bugs filed in 7d	4	not captured	—

[†] Earlier daily reports listed "30 open bugs." That came from `gh issue list ... --json number | length` which silently caps at the default page size. The true week-over-week count is 54 in both windows (the daily-health-check skill needs `--limit 200`).

Persistent vs Flaky Failures

No persistent failures active. All previously-persistent nightly failures resolved on the 2026-05-28 run.

Resolved this week:

- `test_cat_4d_dim2_zero`, `test_cat_4d_dim_m2_empty_first` — 5 consecutive nightlies (May 22–27). Regression from PR #2089's 1D `[0]` scalar-tensor layout; PR #2259 was incomplete. Recovered May 28.
- `test_instantiate_device_type_tests_mro` — failed May 20–21 (PT 2.11 device-name regression). Fixed by PR #2161.

Intermittent (watch):

- `test_layernorm_2d_lx_planning_reduction` — 2/6 days failing, fp16 tolerance class. Same shape as the now-resolved `test_activation_fn_mish_fp16_lx_planning_reduction`.

Bug Backlog Shape (54 open)

Bucket	Count	%	Examples
Fresh (<24h)	4	7%	#2329, #2323, #2314, #2313
Active (≤7d, recently updated)	32	59%	#1423, #2177, #1969, #1919, ...
Stalled-recent (7–30d)	3	6%	#2166, #1996, #1980

Aging (30–90d)	6	11%	#1392, #1712, #1412, #1713, #1479, #1260
Stale (>90d)	9	17%	#488, #637, #446, #456, #476, #537

The 59% Active share is partly inflated by automated cross-link updates on old model-bringup bugs (Mistral-Small / Ministral). Real engineering activity is closer to half that.

Cross-Repo Activity (Past 7 Days)			
Repo	Commits	API-touching	Risk
deeptools	82	22 (27%)	High
flex	9	6 (67%)	High
torch-spyre	56	2 (4%)	—

Notable upstream commits:

- flex a233ca5 — Add FlexAllocator::segment_for_region (#1034). Consumed by RuntimeStream; will surface in torch-spyre's allocator integration.
- flex 5132737 — Profiler API consolidation (#1018). Re-combines PROFILER_STOP_HANDLE / PROFILER_STOP ; split-macro call sites break.
- flex c9e6f54 — Remove namespace-level using in vf_streamer.hpp (#1075). Downstream code relying on transitive symbol exposure may need explicit qualifications.
- deeptools 0ded6c7f — BaseOpt/RcuOpt 16HMI virtual hbm segments. Modifies signatures across 4 headers (19 insertions).
- deeptools f182ab3 — JobPlan launch (already mirrored in torch-spyre as #2013).

Week ends with all CI workflows green and 54 open bugs. PR #2218 (PT 2.12 upgrade) was unblocked yesterday via fix commits delivered through ani300/torch-spyre#1; awaiting his review before merging upstream.
